

For the past 6 years now I have been trying to obtain broadband internet access from Nesbe cablevision. Unfortunately Nesbe will not give me the time of day as far as where the internet access is available or if it will ever be in my area. Why am I stuck with a cable company that offers substandard service, just because I happen to want to live outside of Lynchburg city???? I am currently writing complaint letters to Nesbe, my board of supervisors, and county administrator. I am tired of dealing with this company and am resenting the laws that have allowed them to CONTROL this area and limit it's advancements into the rest of the world. If Lynchburg city can cover their whole area with high speed internet in less than a year, then I do not understand why Nesbe cannot. I would suggest that Adelphia be moved into Nesbe's territory to give them some competition, or just take over their territory completely. I know a lot of people that live in Campbell County and are fed up with Nesbe as a company, not to mention the fact that they have no broadband program. This is just one of many letters that is being sent out because of this law that prohibits any competition of high speed internet access over cable. (Being as no other company is out here for high speed internet, I am severely limited as to my choices).
